

COMPACTABLE WASTE COLLECTION

Wheelie bin collection as well as our 3m³ and 6m³ skips are used for the storage of general soft waste which can be discharged directly into the back of a refuse compactor truck, which compacts the waste before disposal at a landfill. This service is ideal for shopping centres, housing complexes and businesses whose waste streams are compactable.

GENERAL BENEFITS:

- Multiple skips and bins can be collected before having to dispose of at landfill.
- Save on Transport Costs.
- Less emissions to the environment.

BUSINESS BENEFIT:

- Reduces pilferage (stealing things of little value).
- Cuts Operational Costs.
- Improves the aesthetic value of a business.
- Trash cans and containers are used in traditional waste management schemes. A pile-up and resulting overflow of waste material across the bins characterizes this condition. There was also a need for a location to store entire garbage bags. Trash compactors ensure a sanitary business climate by eliminating overflow and unsightly garbage.
