

EARTH BIN

Earthbin is a semi-submerged waste container which is used in high profile areas, where open skips would look too untidy. A specialised truck is used to remove the bags inside the bins which is then compacted and taken to a landfill for disposal. Bin sizes range from 5m³, 1.5m³, 300L and 200L.

GENERAL BENEFITS:

Durable Material

- Designed with highly durable polyethylene and corrosion-resistant materials, the Earthbin is built to last for years to come.

Environmentally Friendly

- The Earthbin is made of recyclable plastic and requires no special retrieval service. A specialised compacter truck fitted with a crane will be able to pick up the bin, dump the bin, and set the bin back in place with ease.

BUSINESS BENEFITS:

- The shape and design of the bin is compact, aesthetically pleasing and eliminates enclosures.
- Lockable lids, prevents wildlife from rifling through waste as well as illegal use of one's bin.
- Prevents waste from being blown by wind.
- Pest and Odour control
- Built green, recyclable and keeps sites clean.
- Saves space and fits anywhere
- Safeguards users, prevents illegal activity and dumping.

CONSUMER BENEFITS:

- The shape and design of the bin is compact, aesthetically pleasing and eliminates enclosures.
- Lockable lids, prevents wildlife from rifling through waste as well as illegal use of one's bin.
- Prevents waste from being blown by wind.
- Pest and Odour control.
- Built green, recyclable and keeps sites clean.
- Saves space and fits anywhere.
- Safeguards users, prevents illegal activity and dumping.
