

MEDICAL WASTE COLLECTION AND DISPOSAL

Skip Hire's refrigerated trucks remove medical waste from hospitals, clinics, private practices and health posts. The waste is weighed onsite and an invoice is generated using our online digital invoicing software Mobiworks. The waste is then taken to our state-of-the-art licensed medical waste facility (Ecosteryl) for treatment. The facility disinfects and neutralises the waste so that it is rendered harmless, ensuring that no negative environmental impact is caused. The by-product after treatment, allows the waste to be taken to a government landfill for disposal.

MEDICAL WASTE FACILITY

Medical waste collected from our clients in a refrigerated truck is treated using non-burn European technology. The facility disinfects and neutralises the waste so that it is rendered harmless, ensuring that no negative environmental impact is caused. The by-product after treatment, allows the waste to be taken to a general landfill for disposal.

GENERAL BENEFITS:

- Helps control nosocomial diseases (hospital acquired infections), complementing the protective effect of proper hand washing.
- Cuts cycles of infection
- Easily and cost-effectively addresses health care worker safety issues, including reducing risk of needle sticks.
- Control zoonosis (diseases passed to humans through insects, birds, rats and other animals).
- Avoid negative long-term health effects; e.g, cancer, from the environmental release of toxic substances such as dioxin, mercury and others.

BUSINESS BENEFIT:

- Prevents illegal repackaging and resale of contaminated needles.
