

POTABLE WATER DELIVERY SERVICE

Surface water is treated and raised to 'Botswana Bureau of Standards' Class 1 drinking quality water which is delivered for drinking, filling of swimming pools, construction and irrigation purposes. This service is rendered to various clients who do not have access to municipal water supply from Water Utilities Corporation. This water is delivered in volumes of 5 000, 8 000, 10 000, 18 000 and 30 000 litres.

GENERAL BENEFITS:

- Potable water is essential for survival and is required by all, regardless of age, health status, or lifestyle. Water quality is critical in terms of how it tastes and smells, as well as how well it meets reasonable quality requirements set by local and national regulations.
- You are assured of a consistent supply of clean, uncontaminated water.
- Water delivery is an efficient system that will ensure that you get your drinking water supply according to a pre-set schedule.
- You can reduce the use of individual plastic bottles by committing to a water delivery schedule.
- Surface water as opposed to borehole water prevents limescale build up on geysers, tapes, kettles, washing machines and showers as well as oxidation of pipes.

BUSINESS BENEFITS:

- Saved travel and waiting time for water collection.
- Can lead to a rise in the value of property.

CONSUMER BENEFITS:

- Pre-treated water at lower costs for averted treatment costs for households.
